REFERENCES:

- A. Navy Memo to Chairman, UAB, TCS 2360-57
(OP-922HLF/my Ser WT-00375, 18 Nov. 57 with
Attachments.
- B. USAF Memo to Chairman, UAB, TH 1711-6,
5 Nov. 1956.
- C. UAB Memo, TCS-371-56, 7 Nov. 1956.

1. The Navy requests (Reference A) that the UAB authorize production of CHESSE-corrected [redacted] for a series of specified priority targets for which the Navy has atomic strike responsibilities. The Navy has the facilities to produce these materials in Washington. Two points present themselves, one involving previous action by the UAB; the other, protection of source.

25X1C

2. In November of 1956 the Air Force presented a plan for utilizing information derived from CHESSE materials in the production of standard target graphics, including [redacted] (Reference B). This plan, concurred in by the Army and Navy and approved by the UAB (Reference C), designated the Air Force to be the coordinating agency for the production of standard air target graphics containing CHESSE material, including the scheduling of production for all agencies, and the Air Force has been producing graphics under this charter similar to those for which the Navy requests production be authorized. The Navy request was forwarded via the Air Force but Air Force views relative to the Navy problem have not been determined.

3. The problem of protection source in this material involves a critical position in which the great need for the up-to-date TAAR's is balanced against the fact that anyone familiar with [redacted] will likely conclude that details contained were obtained from aerial photography of recent date. Denial, of course, can be made. A statement on

the problem by [REDACTED] of HTAUTOMAT, who was engaged in this preparation of [REDACTED] for several years, is enclosed for your information. It would seem, however, that, in so far as content is concerned, the decision previously made when permission was granted to Air Force would be applicable to Navy as well.
